

Converting Measurements

Learning Objective: To convert between measurements including the use of decimal numbers.

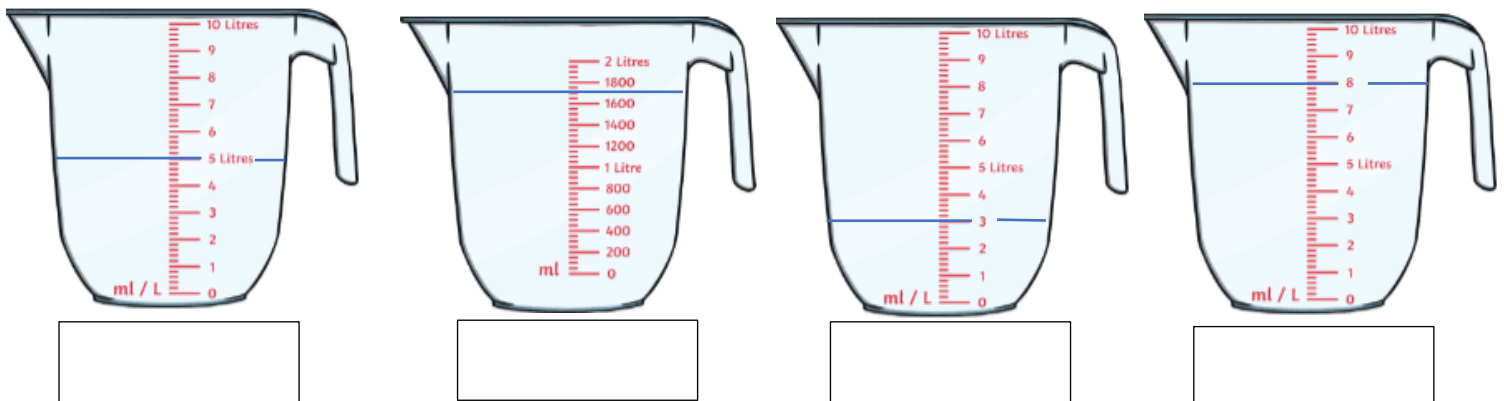

Task 1: Complete the table to convert the measurements in each row.

	Cm to mm (x10)	M to cm (x100)	Km to m (x1000)
4	40 mm	400 cm	4000 m
8			
7.5			
2.1			

Task 2: Convert and order the measurements from smallest to biggest in grams.

2 kg	5.5 kg	10 kg	4000 g
Smallest			Biggest

Task 3: Convert and number the measurements from smallest to biggest in millilitres.

Task 4: Read and answer the worded questions below.

- Chief John needs 1.5 kg of flour to bake a cake but the shop only sells flour in grams. Work out the measurement of flour in grams.
- Mary has bought 7 bottles of pop. The bottles have a capacity of 1 litre each. How many millilitres of pop has Mary bought?
- Lewis created an extra-long ruler. The ruler was 6 metres long but how long is this in centimetres?
